

## **Abstract**

Most companies always have problems in making payments to some customers, so the goal of this project will be to research cases of defaulted payments and predict the possibility of default.

## **Dataset**

The default of credit card clients dataset will be used to meet the study's goal. This dataset includes:

Features such as

Dataset Link: <https://archive.ics.uci.edu/ml/datasets/default+of+credit+card+clients>

## **Tools**

Tensor Flow, matplotlib, pandas will be used to discover the data and train a model in order to meet the purpose of this study. Jupyter notebook will be used to complete the task.

## **WHAT YOU SHOULD DO**

Look at the data and come up with EDA stages, then fit the data with a model.
